## Other Trainings

- Other Trainings
- Web API (Udemy - BTK Academy)  
C# (Udemy - ISMEK)  
HTML-CSS-JS (Udemy)  
English (BTK Academy - ISMEK)

## Projects

**Fitness Tracking**  
<https://github.com/serkancelen/Fitness>

Project Purpose: This is an API service designed for individuals to input their exercise and nutrition programs and to observe their progress over time.  
(Acunmedya Academy Final Project)

**Modascon**  
<https://github.com/serkancelen/Modascon>

I designed and created an e-commerce platform project, which differs from my Fitness project in that it includes Identity, Mail Service, Authorization, Filter, Pagination, and a detailed ADMIN interface. Additionally, a payment method has been added through Iyzico APIs.

**My Personal Website**  
[www.serkancelen.com.tr](http://www.serkancelen.com.tr)

I created this project with the idea of a blog and digital CV in mind, and unlike other projects, I implemented deployment processes to publish it and present it to you.
